

Professional Summary:

- Data Engineer with approximately 4 years of experience, including 2.5 years in **Azure Data Engineering** and 1.5 years in **SQL development**.
- Experienced in designing, building, and optimizing scalable data pipelines using **Azure Data Factory** and **Azure Databricks**.
- Strong expertise in **PySpark** and **SQL for large-scale data transformation, aggregation, and performance tuning**.
- Skilled in developing robust data models and data warehousing solutions to ensure data accuracy, integrity, and efficient reporting.
- Proficient in implementing end-to-end ETL workflows, automating data processes, and enhancing pipeline reliability.
- Experienced in collaborating with cross-functional teams and stakeholders to deliver business-aligned data solutions.

Education:

GIET UNIVERSITY	Odisha, India
Bachelor Of Technology (Electrical and Electronics Engineering)	May 2017 – May 2021

Technical Skills

- **Programming Languages:** Python, SQL, PySpark (Databricks)
- **Databases:** Azure SQL Database, MySQL, SQL Server
- **Data Integration & ETL Tools:** Azure Data Factory, Data Flows
- **Cloud Storage & Serverless Computing:** Azure Data Lake
- **Development Platforms:** Jupyter Notebook, Visual Studio Code
- **Azure Services:** Azure Key Vault, Azure Storage Account, Azure Automation

Work Experience:

Associate - Projects Cognizant, Bangalore, India Project 3 Client: OPTUM - UHG Responsibilities: • Developed and optimized Azure Data Factory (ADF) pipelines, significantly reducing execution time and improving processing efficiency. • Designed and orchestrated end-to-end data workflows using ADF components such as Pipelines, Linked Services, Datasets, Lookup, Get Metadata, ForEach, and If Condition activities. • Implemented Incremental Load methodology in ADF to efficiently process new and updated data. • Engineered Spark applications in Azure Databricks using PySpark and Spark SQL for data extraction, transformation, and aggregation across multiple file formats. • Transformed data from Parquet to Delta format, improving storage optimization and query performance. • Built dynamic configuration frameworks using parameterized pipelines and control tables to enable reusable and scalable data ingestion processes. • Established centralized logging mechanisms to enhance monitoring, debugging, and pipeline traceability. • Integrated Azure Key Vault for secure storage and management of connection strings and sensitive credentials.	Aug 2025-Continued
--	--------------------

Associate Software Engineer | SOAIS, Bangalore, India

Aug 2023- July 2025

Project 2 | Client: DOMTAR

Responsibilities:

- Collaborated with business stakeholders to gather and analyze functional requirements, aligning data integration solutions with business objectives.
- Utilized Azure Data Factory to extract data from Azure storage services and load it into cloud data platforms to support reporting and analytics needs.
- Implemented Azure Logic Apps to automate notification workflows, enabling real-time job status updates and reducing manual intervention.
- Provided production support during hyper care and maintenance phases, ensuring system stability and timely issue resolution.
- Actively participated in Agile ceremonies including daily stand-ups, sprint planning, story grooming, and retrospectives to ensure aligned and timely project delivery.

Associate Software Engineer | Prolifics, Hyderabad, India

Oct 2021- July 2023

Project 1 | Client: Arden University

Responsibilities:

- Extracted, transformed, and validated data using SQL from multiple source systems to support accurate and timely business reporting.
- Designed, optimized, and maintained complex SQL queries and stored procedures, significantly improving query performance and data retrieval efficiency.
- Developed analytical reports and dashboards to deliver actionable insights and support data-driven decision-making.
- Automated recurring data processing and reporting tasks, reducing manual effort and enhancing operational efficiency.
- Collaborated with cross-functional stakeholders to translate business requirements into scalable and reliable data solutions.
